

Sandeep Kolte

PROFESSIONAL SUMMARY

Product and engineering leader at LegalZoom with deep, hands-on experience building AI-native internal tools that automate complex legal and marketing workflows. Designs and ships full-stack applications end-to-end — from conversational AI agents to USPTO API integrations — using the Claude API, React, Node.js, and modern web tooling. Works directly with attorneys, paralegals, CMO-level stakeholders, and cross-functional teams to translate business needs into production-grade software. Fluent in both legal tech (trademark prosecution, USPTO procedures) and marketing tech (AI-native asset creation, email automation). Demonstrated ability to rapidly prototype, iterate on real user feedback, and deliver tools that reduce manual effort across high-value workflows.

CORE SKILLS & COMPETENCIES

AI & LLM Engineering	Frontend Development	Backend Development
• Claude API (Anthropic) • Prompt engineering & tuning • Conversational agent design • Multi-step AI workflow orchestration • Structured output & tool use • AI-native product design	• React (hooks, components, state) • Vanilla JavaScript (ES6+) • HTML5 / CSS3 • Responsive UI design • Figma (design review & plugins) • Google Docs / Drive API	• Node.js / Express • REST API design • PDF parsing & processing • USPTO TSDR / ODP APIs • Server-side prompt pipelines • GitHub / version control
Legal Tech	Marketing Tech	Product & Process
• USPTO trademark procedures • Office Action analysis • DuPont factor framework • §2(d) likelihood-of-confusion • Trademark specimen collection • TSDR / data.uspto.gov APIs	• AI-native content workflows • Email template review automation • Marketing brief automation • E2E asset creation pipelines • Figma design version comparison • Brand tone-of-voice tooling	• Full-stack prototyping • Requirements gathering • Stakeholder collaboration • Workflow architecture design • GitHub Pages / deployment • Technical documentation

AI TOOLS & PLATFORMS

Claude Code (Anthropic) — Primary AI coding assistant and agentic IDE used daily to design, build, and iterate on full-stack applications.

Claude API / Anthropic SDK — Direct API integration for building AI-powered internal tools; experienced with streaming, tool use, prompt caching, and model selection (Sonnet vs Opus tradeoffs).

Figma + Figma MCP — Design review, version comparison plugin development, and code-to-design bridging via MCP.

GitHub / GitHub Pages — Source control, PR-based workflow, and static site deployment (Iz-riseup internal portal).

Google Workspace APIs — Automated export of AI-generated marketing briefs directly to Google Docs.

USPTO APIs (TSDR / ODP) — Integration with data.uspto.gov for live trademark data retrieval in legal tools.

Glean (Enterprise Search) — Internal knowledge search and document retrieval for LegalZoom.

Snowflake — Enterprise data platform used in the LegalZoom data ecosystem.

KEY PROJECTS & INITIATIVES

USPTO Office Action Response Tool (Iz-loc-generator)

LegalZoom Legal Services (LZLS) · 2026

[Node.js](#) · [Express](#) · [Vanilla JS](#) · [Claude API](#) · [USPTO ODP API](#) · [PDF Parsing](#)

Built a full-stack internal tool for LZLS trademark attorneys to dramatically reduce the time spent drafting responses to USPTO Office Actions. The tool parses uploaded OA PDFs, extracts cited marks, classifies refusal types (§2(d) likelihood of confusion, disclaimer, domicile, ID issues), runs AI-powered DuPont factor analysis via Claude Sonnet, and generates tailored legal arguments from a curated argument module library. Integrated with the USPTO data.uspto.gov ODP API for live TSDR lookups. Submitted as PR #76 in the legalzoom/pas repository.

- Refusal type detection: §2(d) LOC, disclaimer, domicile, ID/goods description
- DuPont factor framework: AI narrows arguments to factors relevant for each specific case
- Multi-cited-mark support: architecture handles OAs with multiple conflicting registrations
- PDF parsing: reliable extraction of applicant info, serial numbers, OA date, examiner details
- Cost-optimized: Claude Sonnet only (vs Opus); explicit conciseness prompting
- Collaborated directly with attorneys Anu Sethee and Lauren C. for requirements and QA

Marketing Brief Builder (MAS — Step 1 of 14)

LegalZoom Marketing · 2026

[React](#) · [Node.js](#) · [Express](#) · [Claude API](#) · [Google Docs API](#)

Designed and built the Brief Builder, the entry point of LegalZoom's CMO-sponsored Marketing Acceleration Suite (MAS) — a 14-step end-to-end AI-native workflow for creating and launching web pages and email campaigns. The Brief Builder is a conversational agent web app that interviews the marketer, gathers all brief fields through natural dialogue, and exports a structured brief directly to Google Docs. Part of a top-down initiative led by Daniel (CMO) to reimagine how marketing assets are created.

- Conversational AI agent interface built on Claude API with React frontend
- Structured brief export to Google Docs via Google Drive API
- Covers Step 1 (Work Initiation) of the 14-step E2E workflow
- Architecture supports extension to Steps 2–14: strategy generation, business impact projection, Figma asset generation, quality review, and build automation
- Presented as part of MAS Build Day (June 3, 2026, Mountain View)

Email Review Agent

LegalZoom Marketing · 2026

AI Agent · Email Automation · Internal Tooling

Built an internal web tool that automates the review of redesigned email templates against brand and quality standards. Reduces the manual review cycle for the marketing team by applying AI-driven checks against defined criteria. Developed in collaboration with Rebecca Faulkner.

- Automated email template review against brand guidelines
- Reduces manual QA cycle for redesigned marketing emails
- AI scoring and feedback generation per template

Conversational AI Email Design Assistant

LegalZoom Marketing · 2026

Conversational AI · Email Design · Claude API

Built a conversational AI assistant that helps designers and marketers create and iterate on email designs through natural language dialogue. The assistant understands design intent, applies brand standards, and generates design recommendations.

- Natural-language-driven email design iteration
- Brand-aware design recommendation engine
- Conversational loop with structured output for design specs

LZLS Trademark Intake Application

LegalZoom Legal Services · 2026

Architecture · Full-Stack · Legal Tech

Designed the architecture for a trademark intake application to streamline how LZLS receives, classifies, and routes new trademark matters. Covers intake form design, data modeling, and workflow routing logic.

- End-to-end intake flow architecture for new trademark matters
- Classification and routing logic for attorney assignment
- Integration touchpoints with USPTO and internal case management

LZLS Trademark Specimen Collection Tool

LegalZoom Legal Services · 2026

Legal Tech · Automation · USPTO

Built tooling to support the collection and organization of trademark specimens for USPTO filings, reducing manual effort for paralegals and attorneys preparing use-based applications and statements of use.

- Specimen upload, categorization, and tracking
- Automated compliance checks for specimen acceptability
- Integration with LZLS trademark workflow

Figma Design Version Comparison Plugin

LegalZoom · 2026

[Figma Plugin](#) · [Design Tooling](#) · [JavaScript](#)

Developed a Figma plugin that enables designers to compare design versions side-by-side, highlighting differences between iterations. Addresses a common pain point in design review cycles where version drift is hard to track visually.

- Side-by-side version diff for Figma frames and components
- Visual change highlighting between design iterations
- Integrates natively into Figma's plugin ecosystem

URL Validation Web Application

LegalZoom · 2026

[Web App](#) · [Automation](#) · [QA Tooling](#)

Built a web application for bulk URL validation — checking for broken links, redirects, and accessibility across large sets of URLs. Used internally for QA on web properties.

- Bulk URL health checking (status codes, redirects, timeouts)
- CSV import/export for large URL sets
- Dashboard with pass/fail summary and drill-down detail

Iz-riseup Internal Portal (GitHub Pages)

LegalZoom · 2026

[GitHub Pages](#) · [Static Site](#) · [Internal Portal](#)

Set up and deployed an internal GitHub Pages site for the Iz-riseup initiative, providing a lightweight, version-controlled web presence for internal team resources and documentation.

- GitHub Pages deployment pipeline from repository
- Static site configuration and custom domain setup
- Version-controlled documentation and resource portal

BUSINESS USE CASES DELIVERED

Legal Workflow Automation — Reduced attorney time on USPTO Office Action responses by automating PDF parsing, refusal classification, and argument generation — replacing hours of manual legal research per case.

AI-Native Marketing Asset Creation — Enabled LegalZoom's marketing team to initiate and build web pages and email campaigns through AI dialogue rather than manual brief writing and handoffs.

Email Quality Assurance at Scale — Automated review of redesigned email templates against brand standards, compressing multi-day manual review cycles.

Trademark Intake Streamlining — Architected an intake system to reduce friction in how trademark matters are received, classified, and routed to attorneys.

Design Version Control — Gave designers a repeatable, tooled way to compare and communicate design changes — reducing version confusion in review cycles.

Internal Web Infrastructure — Deployed lightweight internal portals and tooling pages using GitHub Pages, giving teams a low-friction way to publish resources.

Data Validation at Scale — Built URL validation tooling that lets QA teams check thousands of links in batch, surfacing broken or redirected URLs before launch.

CROSS-FUNCTIONAL COLLABORATION

Works directly with attorneys, paralegals, CMO-level executives, marketing managers, and engineering teams to translate domain expertise into production AI tools. Key collaborators include:

- Anu Sethee (LZLS, asethee) — Trademark attorney, primary stakeholder for OA Response Tool
- Lauren C. (LZLS) — Trademark SME, DuPont factor applicability and argument quality validation
- Daniel (CMO) — Executive sponsor of the Marketing Acceleration Suite (MAS)
- Hannah Leng — E2E AI-native webpage workflow document owner
- Kayli Murphy — MAS workflow collaborator
- Rebecca Faulkner — Email Review Agent co-builder

PORTFOLIO WEBSITE HIGHLIGHTS — RECOMMENDED FRAMING

The following framing is recommended when presenting this work to prospective employers, collaborators, or clients:

- "I build AI-native internal tools that replace manual, expert-labor-intensive workflows" — the throughline across all projects.
- Legal Tech angle: rare combination of deep trademark/USPTO process knowledge + full-stack AI engineering.
- Marketing Tech angle: end-to-end workflow thinker who can take a CMO vision to a shipped web app.
- Claude Code power user: demonstrate velocity — all projects shipped rapidly using AI-assisted coding.
- Show the OA Response Tool as your flagship: it has the most depth (real legal domain, real API integrations, real attorney feedback loop).
- Show the Brief Builder as your vision project: it demonstrates 14-step workflow thinking and CMO stakeholder alignment.
- Metrics to gather before publishing: time saved per OA (attorney estimate), email review cycle reduction %, and number of briefs processed.

TECH STACK AT A GLANCE

Category	Technologies
AI / LLM	Claude API (Sonnet, Opus), Anthropic SDK, Claude Code
Frontend	React, Vanilla JS, HTML5, CSS3
Backend	Node.js, Express
APIs & Integrations	USPTO ODP / TSDR, Google Docs API, Google Drive API
Design Tools	Figma, Figma Plugin API
DevOps / Deploy	GitHub, GitHub Pages
Data	Snowflake, JSON data modeling
Enterprise Tools	Glean, Google Workspace
Document Processing	PDF parsing (pattern-based), reportlab, pypdf
